

## MULTIFUNCTIONS RMB BOX Switching & KVM Remoting

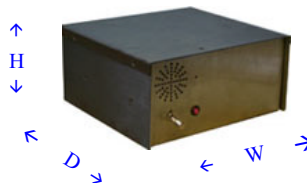

The RMB box has the same properties than the "RM1 multifunctions rack". As the rack, the RMB box can integrate the same cards, but it is limited to **2 modules** only.

RMB is as specific, as flexible because it makes possible to have different modules for the **video remote control** and for the **switchers** within a small room, in order to **display high resolution**

### DIMENSIONS

- Width : 155 mm
- Height : 75 mm
- Depth : 146 mm

### DESCRIPTION

- Switchers: screens, keyboard, mouse for CPU with 1 to 4 video outputs 1600 x 1200 (even 2000 x 2000)
  - Management of regular position/ help position without creating blocking
  - Switching KVM followed by a remote control system
  - Switcher and/or remote control of the sound
  - Switcher and/or remote control of annexe connection (serial port... etc.)
  - Switcher at a separated distance (without shortcut on the keyboard)
  - Management for taking control at a local distance or at a specific distance.
  - Complex switcher and/or remote control
- ➔ All these racks are to deal with many different functions : to distribute video **RGBS** or to equalize lenght of cable.
- ➔ Each module have its own backpanel.
